Product Name: IRF-3 (phospho Ser396) Rabbit

Polyclonal Antibody Catalog #: APRab04870

Summary

Production Name IRF-3 (phospho Ser396) Rabbit Polyclonal Antibody

Description Rabbit Polyclonal Antibody

Host Rabbit
Application WB,ELISA

Reactivity Human, Mouse, Rat

Performance

Conjugation Unconjugated

Modification Phospho Antibody

Isotype IgG

Clonality Polyclonal Form Liquid

Store at 4°C short term. Aliquot and store at -20°C long term. Avoid freeze/thaw $\bf Storage$

cycles.

Buffer Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% New type preservative N.

Purification Affinity purification

Immunogen

Gene Name IRF3

Alternative Names IRF3; Interferon regulatory factor 3; IRF-3

Gene ID 3661.0

Q14653.The antiserum was produced against synthesized peptide derived from human **SwissProt ID**

IRF-3 around the phosphorylation site of Ser396. AA range:362-411

Application

Dilution Ratio WB 1:500-2000 ELISA 2000-20000

Molecular Weight 48-55kd

 Product Name: IRF-3 (phospho Ser396) Rabbit

Polyclonal Antibody Catalog #: APRab04870

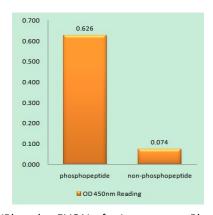

Background

This gene encodes a member of the interferon regulatory transcription factor (IRF) family. The encoded protein is found in an inactive cytoplasmic form that upon serine/threonine phosphorylation forms a complex with CREBBP. This complex translocates to the nucleus and activates the transcription of interferons alpha and beta, as well as other interferon-induced genes. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided by RefSeq, Nov 2011], function: Mediates interferon-stimulated response element (ISRE) promoter activation. Functions as a molecular switch for antiviral activity. DsRNA generated during the course of an viral infection leads to IRF3 phosphorylation on the C-terminal serine/threonine cluster. This induces a conformational change, leading to its dimerization, nuclear localization and association with CREB binding protein (CREBBP) to form dsRNA-activated factor 1 (DRAF1), a complex which activates the transcription of genes under the control of ISRE. The complex binds to the IE and PRDIII regions on the IFN-alpha and IFN-beta promoters respectively. IRF-3 does not have any transcription activation domains.,PTM:Constitutively phosphorylated on many serines residues. C-terminal serine/threonine cluster is phosphorylated in response of induction by IKBKE and TBK1. Ser-385 and Ser-386 may be specifically phosphorylated in response to induction. An alternate model propose that the five serine/threonine residues between 396 and 405 are phosphorylated in response to a viral infection. Phosphorylation, and subsequent activation of IRF3 is inhibited by vaccinia virus protein E3., similarity: Belongs to the IRF family., similarity: Contains 1 tryptophan pentad repeat DNA-binding domain, subcellular location: Shuttles between cytoplasmic and nuclear compartments, with export being the prevailing effect. When activated, IRF3 interaction with CREBBP prevents its export to the cytoplasm., subunit: Homodimer; phosphorylation-induced. Interacts with CREBBP. May interact with MAVS. Interacts with IKBKE and TBK1. Interacts with TICAM1 and TICAM2. Interacts with rotavirus A NSP1 (via C-terminus); this interaction leads to the proteasome-dependent degradation of IRF3.,tissue specificity:Expressed constitutively in a variety of tissues.,

Research Area

Toll_Like;RIG-I-like receptor;Cytosolic DNA-sensing pathway;

Image Data

Enzyme-Linked Immunosorbent Assay (Phospho-ELISA) for Immunogen Phosphopeptide (Phospho-left) and Non-

Product Name: IRF-3 (phospho Ser396) Rabbit

Polyclonal Antibody Catalog #: APRab04870

Phosphopeptide (Phospho-right), using IRF-3 (Phospho-Ser396) Antibody

Western blot analysis of lysates from Jurkat cells treated with EGF 200ng/ml 30 ', using IRF-3 (Phospho-Ser396) Antibody.

The lane on the right is blocked with the phospho peptide.
