Product Name: PKM2 Rabbit Polyclonal Antibody

Catalog #: APRab16220

Summary

Production Name PKM2 Rabbit Polyclonal Antibody

Description Rabbit Polyclonal Antibody

Host Rabbit

Application IF,WB,IHC,ELISA **Reactivity** Human,Mouse,Rat

Performance

ConjugationUnconjugatedModificationUnmodified

Isotype IgG

Clonality Polyclonal Form Liquid

Store at 4°C short term. Aliquot and store at -20°C long term. Avoid freeze/thaw

cycles.

Buffer Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% New type preservative N.

Purification Affinity purification

Immunogen

Storage

Gene Name PKM

PKM; OIP3; PK2; PK3; PKM2; Pyruvate kinase isozymes M1/M2; Cytosolic thyroid

Alternative Names hormone-binding protein; CTHBP; Opa-interacting protein 3; OIP-3; Pyruvate kinase

2/3; Pyruvate kinase muscle isozyme; Thyroid hormone-binding protein 1; THBP1; Tu

Gene ID 5315.0

P14618.The antiserum was produced against synthesized peptide derived from human

PKM2. AA range:181-230

Application

SwissProt ID

Dilution Ratio IF 1:50-200 WB 1:500-2000, ELISA 1:10000-20000 IHC 1:50-300

Molecular Weight 58kD

Product Name: PKM2 Rabbit Polyclonal Antibody

Catalog #: APRab16220

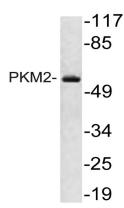

Background

This gene encodes a protein involved in glycolysis. The encoded protein is a pyruvate kinase that catalyzes the transfer of a phosphoryl group from phosphoenolpyruvate to ADP, generating ATP and pyruvate. This protein has been shown to interact with thyroid hormone and may mediate cellular metabolic effects induced by thyroid hormones. This protein has been found to bind Opa protein, a bacterial outer membrane protein involved in gonococcal adherence to and invasion of human cells, suggesting a role of this protein in bacterial pathogenesis. Several alternatively spliced transcript variants encoding a few distinct isoforms have been reported. [provided by RefSeg, May 2011], catalytic activity: ATP + pyruvate = ADP + phosphoenolpyruvate.,cofactor:Divalent metal cations,,cofactor:Magnesium,,cofactor:Potassium,,enzyme regulation:Isoform M2 is allosterically activated by D-fructose 1,6-biphosphate (FBP). Inhibited by oxalate and 3,3',5triiodo-L-thyronine (T3), function: Glycolytic enzyme that catalyzes the transfer of a phosphoryl group from phosphoenolpyruvate (PEP) to ADP, generating ATP., miscellaneous: There are 4 isozymes of pyruvate kinase in mammals: L, R, M1 and M2. L type is major isozyme in the liver, R is found in red cells, M1 is the main form in muscle, heart and brain, and M2 is found in early fetal tissues as well as in most cancer cells, online information: Pyruvate kinase entry, pathway: Carbohydrate degradation; glycolysis; pyruvate from D-glyceraldehyde 3-phosphate: step 5/5.,PTM:Phosphorylated upon DNA damage, probably by ATM or ATR.,similarity:Belongs to the pyruvate kinase family, subunit: Monomer and homotetramer. Exists as a monomer in the absence of FBP, and reversibly associates to form a homotetramer in the presence of FBP. The monomeric form binds T3. Tetramer formation induces pyruvate kinase activity. Interacts with HERC1.,

Research Area

Glycolysis / Gluconeogenesis; Purine metabolism; Pyruvate metabolism; Type II diabetes mellitus;

Image Data

Western blot analysis of lysate from HT29 cells, using PKM2 antibody.
