

## Summary

Name	HSP40/DNAJB1
Purity	Greater than 95% as determined by reducing SDS-PAGE
Endotoxin level	<1 EU/µg as determined by LAL test.
Construction	Recombinant Human Heat Shock 40 kDa Protein is produced by our E.coli expression system and the target gene encoding Gly2-Ile340 is expressed with a 6His tag at the C-terminus.
Accession #	P25685
Host	E.coli
Species	Human
Predicted Molecular Mass	39.1 KDa
Formulation	Lyophilized from a 0.2 $\mu$ m filtered solution of PBS, 1mM EDTA, pH 7.4.
Shipping	The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature listed below.
Stability&Storage	Store at $\leq$ -70°C, stable for 6 months after receipt. Store at $\leq$ -70°C, stable for 3 months under sterile conditions after opening. Please minimize freeze-thaw cycles.
Reconstitution	Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is not recommended to reconstitute to a concentration less than 100µg/ml. Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles. Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is not recommended to reconstitute to a concentration less than 100µg/ml. Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles.

## Background

Alternative NamesDnaJ Homolog Subfamily B Member 1; DnaJ Protein Homolog 1; Heat Shock 40<br/>kDa Protein 1; HSP40; Heat Shock Protein 40; Human DnaJ Protein 1; hDj-1;<br/>DNAJB1; DNAJ1; HDJ1; HSPF1BackgroundDnaJ Homolog Subfamily B Member 1 (DNAJB1) is a member of the heat shock<br/>protein family. Heat shock proteins (HSPs) are a highly conserved family of stress<br/>response proteins. HSPs function primarily as molecular chaperones, facilitating the<br/>folding of other cellular proteins, preventing protein aggregation, or targeting<br/>improperly folded proteins to specific degradative pathways. DNAJB1 regulates<br/>cellular processes by aiding in the folding, transport and assembly. DNAJB1<br/>contains a J-domain which controls interaction with the ATPase domain of DnaK.<br/>DNAJB1 interacts with HSP70 and can stimulate its ATPase activity. In addition,<br/>DNAJB1 stimulates the association between HSC70 and HIP.

## Note

For Research Use Only, Not for Diagnostic Use.
