Background Pleckstrin Homology-Like Domain Family A Member 2 (PHLDA2) is a peripheral

membrane protein that belongs to the PHLDA2 family. PHLDA2 is expressed in the placenta and adult prostate gland. In the placenta, it is present in all cells of the villous cytotrophoblast. PHLDA2 plays a role in regulating placenta growth. PHLDA2 may act via its PH domain that competes with other PH domain-

containing proteins, thereby preventing their binding to membrane lipids.
