Product Name: Recombinant Human UPP1 (N-6His)

Catalog #: PEH1794

Summary

Name Uridine Phosphorylase 1/UPP1

Purity Greater than 95% as determined by reducing SDS-PAGE

Endotoxin level <1 EU/μg as determined by LAL test.

Construction Recombinant Human Uridine Phosphorylase 1 is produced by our E.coli

expression system and the target gene encoding Met1-Ala173 is expressed

with a 6His tag at the N-terminus.

Accession # Q86Y75

Host E.coli

Species Human

Predicted Molecular Mass 21.3 Kda

Formulation Supplied as a 0.2 µm filtered solution of 20mM Tris-HCl, 200mM NaCl, 1mM DTT,

pH 8.0.

Shipping The product is shipped on dry ice/polar packs. Upon receipt, store it immediately

at the temperature listed below.

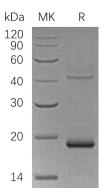

Stability&Storage Store at \leq -70°C, stable for 6 months after receipt. Store at \leq -70°C, stable for 3

months under sterile conditions after opening. Please minimize freeze-thaw

cycles.

Background

Alternative Names UPP1 Protein; Uridine Phosphorylase 1; UPP1

Background Uridinephosphorylase 1 (UPP1) is a member of the family of pentosyltransferase.

Product Name: Recombinant Human UPP1 (N-6His)

Catalog #: PEH1794

UPP1 catalyses the reversible phosphorolysis of uridine to uracil. The expression levels and the enzymatic activity of UPP1 are higher in human solid tumors than in adjacent normal tissues. The high level of UPP1 expression in some tumors makes it a potential prognostic factor for some cancers, such as oral squamous cell carcinoma. UPP1 is important for the homeostatic regulation of intracellular and plasma uridine concentratios. UPP1 plays an important role in the pyrimidine salvage pathway through its catalysis of the reversible phosphorolysis of uridine to uracil.

Note

For Research Use Only, Not for Diagnostic Use.
