# Product Name: Recombinant Mouse Cystatin B (N-6His) Catalog #: PEM0490

## **Summary**

Name Cystatin B/CST8

**Purity** Greater than 95% as determined by reducing SDS-PAGE

**Endotoxin level** <1 EU/μg as determined by LAL test.

Construction Recombinant Mouse Cystatin-B is produced by our E.coli expression system

and the target gene encoding Met1-Phe98 is expressed with a 6His tag at the

N-terminus.

Accession # Q62426

**Host** E.coli

**Species** Mouse

Predicted Molecular Mass 13.3 KDa

Formulation Lyophilized from a 0.2 µm filtered solution of 20mM Tris-HCl, 150mM NaCl, pH

8.0.

Shipping The product is shipped at ambient temperature. Upon receipt, store it

immediately at the temperature listed below.

**Stability&Storage** Store at  $\leq$ -70°C, stable for 6 months after receipt. Store at  $\leq$ -70°C, stable for 3

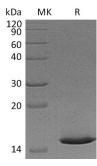

months under sterile conditions after opening. Please minimize freeze-thaw

cycles.

**Reconstitution** Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is

not recommended to reconstitute to a concentration less than 100µg/ml. Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles. # **Background**

# Product Name: Recombinant Mouse Cystatin B (N-6His) Enkilife Catalog #: PEM0490

Alternative Names CPI-B; CST6cystatin B (liver thiol proteinase inhibitor)10STFBcystatin-B; CSTB;

cystatin B (stefin B); Cystatin B; EPM1; Liver thiol proteinase inhibitor; PME; Stefin B;

stefin-B

Background Cystatin B, also called stefin B or liver thiol proteinase inhibitor, is a member of

family 1 of the cystatin superfamily. Like Cystatin A, it is an intracellular inhibitor regulating the activities of cysteine proteases of the papain family such as cathepsins B, H and L. Defects in Cystatin-B / CSTB are the cause of progressive myoclonic epilepsy type 1 (EPM1) which is an autosomal recessive disorder characterized by severe, stimulus-sensitive myoclonus and tonic-clonic seizures.
