Product Name: Recombinant Human IL-21R (C-6His) Catalog #: PHH0905

EnkiLife

Summary

Name IL-21R/Interleukin-21 receptor/IL21R

Purity Greater than 95% as determined by reducing SDS-PAGE

Endotoxin level <1 EU/µg as determined by LAL test.

Construction Recombinant Human Interleukin-21 Receptor is produced by our Mammalian

expression system and the target gene encoding Cys20-Pro236 is expressed

with a 6His tag at the C-terminus.

Accession # Q9HBE5

Host **Human Cells**

Species Human

Predicted Molecular Mass 26 KDa

Formulation Lyophilized from a 0.2 µm filtered solution of 20mM PB, 150mM NaCl, pH 7.4.

Shipping The product is shipped at ambient temperature. Upon receipt, store it

immediately at the temperature listed below.

Store at ≤-70°C, stable for 6 months after receipt. Store at ≤-70°C, stable for 3 Stability&Storage

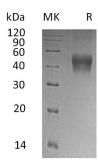

months under sterile conditions after opening. Please minimize freeze-thaw

cycles.

Reconstitution Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is

not recommended to reconstitute to a concentration less than 100µg/ml. Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles. Alternative Names Interleukin-21 receptor; IL-21 receptor; IL-21R; CD360

Background Interleukin-21 receptor is also known as IL-21 receptor, IL-21R, CD360. In humans,

it is encoded by the IL21R gene. It belongs to the type I cytokine receptor family. Type 4 subfamily contains 2 fibronectin type-III domains. Interleukin-21 receptor is selectively expressed in lymphoid tissues and highly expressed in thymus and spleen. IL-21 is produced by CD4+ T cells in response to antigenic stimulation. Its action enhances antigen-specific responses of immune cells. The biological effects of IL-21 include induction of differentiation of T-cells-stimulated B-cells into plasma cells and memory B-cells. It also promotes the anti-tumor activity of CD8+

T-cells and NK cells.

Note

For Research Use Only, Not for Diagnostic Use.
