

# Summary

Name	M-CSF/CSF1/Macrophage colony-stimulating factor 1
Purity	Greater than 95% as determined by reducing SDS-PAGE
Endotoxin level	<0.01 EU/µg as determined by LAL test.
Construction	Recombinant Human Macrophage Colony-Stimulating Factor is produced by our Mammalian expression system and the target gene encoding Glu33- Arg255 is expressed with a 6His tag at the C-terminus.
Accession #	P09603
Host	Human Cells
Species	Human
Predicted Molecular Mass	26.17 KDa
Formulation	Lyophilized from a 0.2 $\mu m$ filtered solution of 20mM PB, 150mM NaCl, pH 7.2.
Shipping	The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature listed below.
Stability&Storage	Lyophilized protein should be stored at $\leq$ -20°C, stable for one year after receipt. Reconstituted protein solution can be stored at 2-8°C for 2-7 days. Aliquots of reconstituted samples are stable at $\leq$ -20°C for 3 months.
Reconstitution	Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is not recommended to reconstitute to a concentration less than 100µg/ml. Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles.Always centrifuge tubes before opening. # Background

# Alternative NamesMacrophage Colony-Stimulating Factor 1; CSF-1; M-CSF; MCSF; Lanimostim; CSF1BackgroundMacrophage Colony-Stimulating Factors (m-csf) are cytokines that act in<br/>hematopoiesis by controlling the production, differentiation, and function of 2<br/>related white cell populations of the blood, the granulocytes and themonocytes-<br/>macrophages. CSF-1 promotes the release of proinflammatory chemokines, and<br/>thereby plays an important role in innate immunity and in inflammatory processes.<br/>It also plays an important role in the regulation of osteoclast proliferation and

differentiation, the regulation of bone resorption, and is required for normal bone development. CSF-1 is required for normal male and female fertility and promotes reorganization of the actin cytoskeleton, regulates formation of membrane ruffles, cell adhesion and cell migration. it also plays a role in lipoprotein clearance.

### Note

For Research Use Only, Not for Diagnostic Use.
