

Summary

Name	CD38/ADP-ribosyl Cyclase 1/cyclic ADP-ribose Hydrolase 1
Purity	Greater than 95% as determined by reducing SDS-PAGE
Endotoxin level	<1 EU/µg as determined by LAL test.
Construction	Recombinant Human ADP-ribosyl Cyclase/cyclic ADP-ribose Hydrolase 1 is produced by our Mammalian expression system and the target gene encoding Val43-Ile300 is expressed with a human IgG1 Fc tag at the C- terminus.
Accession #	P28907
Host	Human Cells
Species	Human
Predicted Molecular Mass	57 KDa
Formulation	Lyophilized from a 0.2 μ m filtered solution of PBS, pH 7.4.
Shipping	The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature listed below.
Stability&Storage	Store at \leq -70°C, stable for 6 months after receipt. Store at \leq -70°C, stable for 3 months under sterile conditions after opening. Please minimize freeze-thaw cycles.
Reconstitution	Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is not recommended to reconstitute to a concentration less than $100\mu g/ml$. Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles. Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is not recommended to reconstitute to a concentration less than $100\mu g/ml$. Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles.

Background

Alternative NamesADP-ribosyl cyclase 1; cyclic ADP-ribose hydrolase;CD38;T10BackgroundCD38, also called ADP-ribosyl cyclase, is a Type II integral membrane protein with
301 amino acids in length that belongs to the ADP-ribosyl cyclase family.It
synthesizes the second messagers cyclic ADP-ribose and nicotinate-adenine
dinucleotide phosphate, the former a second messenger for glucose-induced
insulin secretion. And also moonlights as a receptor in cells of the immune system.
CD38 is expressed in B and T lymphocytes, osteoclasts, and in cardiac, pancreatic,
liver and kidney cells. Through its production of cyclic ADP-ribose, CD38
modulates calcium-mediated signal transduction in many types of cells, including
neutrophils and pancreatic beta cells.
