# Product Name: Recombinant Mouse FcRn Heterodimer (6-6His) Enkillife Catalog #: PHM0634

### **Summary**

Name FcRn/FCGRT & B2M Heterodimer

**Purity** Greater than 95% as determined by reducing SDS-PAGE

**Endotoxin level** <1 EU/µg as determined by LAL test.

Construction Recombinant Mouse IgG Fc Fragment Receptor Transporter is produced by

our Mammalian expression system and the target gene encoding Ser22-

Val301&Ile21-Met119 is expressed with a 6His tag at the C-terminus.

Accession # Q61559&P01887

Host **Human Cells** 

**Species** Mouse

**Predicted Molecular Mass** 32.5&11.6 KDa

Lyophilized from a 0.2 µm filtered solution of PBS, pH 7.4. **Formulation** 

**Shipping** The product is shipped at ambient temperature. Upon receipt, store it

immediately at the temperature listed below.

Store at ≤-70°C, stable for 6 months after receipt. Store at ≤-70°C, stable for 3 Stability&Storage

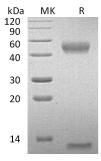

months under sterile conditions after opening. Please minimize freeze-thaw

cycles.

Reconstitution Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is

not recommended to reconstitute to a concentration less than 100µg/ml. Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles. Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is not recommended to reconstitute to a concentration less than 100µg/ml. ## **Background**

# Product Name: Recombinant Mouse FcRn Heterodimer (6-6His) Enkillife Catalog #: PHM0634

IgG receptor FcRn; Neonatal Fc receptor; FCRN **Alternative Names** 

**Background** FcRn complex consist of two subunits: IgG receptor FcRn large subunit p51 (alpha

chain) and Beta-2-microglobulin (Beta chain). The complexes is similar in structure to MHC class I-like heterodimer. Beta-2-microglobulin involved in the presentation of peptide antigens to the immune system. FcRn binds to the Fc region of monomeric immunoglobulins gamma, mediates the uptake of IgG from milk, Possible role in transfer of immunoglobulin G from mother to fetus. A principal component of antibody transport is the neonatal receptor for the Fc portion of immunoglobulin, a heterodimer of a MHC-1 alpha-chain homolog

(FcRn) and beta-2-microglobulin (B2M).
