Background

Cell localization:Membrane.The protein encoded by this gene is an isozyme of the long-chain fatty-acid-coenzyme A ligase

Product Name: ACSL4 Rabbit Monoclonal Antibody
Catalog #: AMRe21426

family. Although differing in substrate specificity, subcellular localization, and tissue distribution, all isozymes of this family convert free long-chain fatty acids into fatty acyl-CoA esters, and thereby play a key role in lipid biosynthesis and fatty acid degradation. This isozyme preferentially utilizes arachidonate as substrate. The absence of this enzyme may contribute to the cognitive disability or Alport syndrome. Alternative splicing of this gene generates multiple transcript variants.
