Background

The protein encoded by this gene is similar to the yeast Mob1 protein. Yeast Mob1 binds Mps1p, a protein kinase essential for spindle pole body duplication and mitotic checkpoint regulation. Three transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Sep 2011], function: Stimulates the kinase activity of STK38L., similarity: Belongs to the MOB1/phocein family., subunit: Binds STK38L.,
