Background

The protein encoded by this gene belongs to the eukaryotic diacylglycerol kinase family. It acts as a modulator that competes with protein kinase C for the second messenger diacylglycerol in intracellular signaling pathways. It also plays an important role

in the resynthesis of phosphatidylinositols and phosphorylating diacylglycerol to phosphatidic acid. Several transcript variants encoding different isoforms have been identified for this gene. [provided by RefSeq, Apr 2017]

Image Data

Western blotting analysis using diacylglycerol kinase alpha antibody (KVA00486). Diacylglycerol kinase alpha (DGKA) knockdown (KD) HSHC cells with 20 µg of total cell lysates. Hsp90 α serves as a loading control. The blot was incubated with diacylglycerol kinase alpha antibody (KVA00486, 1:5,000) and HRP-conjugated goat anti-rabbit secondary antibody (APS0635, 1:10,000) respectively.

Western blotting analysis using diacylglycerol kinase alpha antibody (KVA00486). Total cell lysates (30 µg) from various cell lines were loaded and separated by SDS-PAGE. The blot was incubated with diacylglycerol kinase alpha antibody (KVA00486, 1:5,000) and HRP-conjugated goat anti-rabbit secondary antibody (APS0635, 1:10,000) respectively.

Flow cytometric analysis of Diacylglycerol kinase alpha expression in HepG2 cells using Diacylglycerol kinase alpha antibody (KVA00486, 1:2,000). Green, isotype control; red, Diacylglycerol kinase alpha.
