Background

Annexin VI belongs to a family of calcium-dependent membrane and phospholipid binding proteins. Several members of the

annexin family have been implicated in membrane-related events along exocytotic and endocytotic pathways. The annexin VI gene is approximately 60 kbp long and contains 26 exons. It encodes a protein of about 68 kDa that consists of eight 68-amino acid repeats separated by linking sequences of variable lengths. It is highly similar to human annexins I and II sequences, each of which contain four such repeats. Annexin VI has been implicated in mediating the endosome aggregation and vesicle fusion in secreting epithelia during exocytosis. Alternatively spliced transcript variants have been described. Image Data

Western blotting analysis using Annexin A6 antibody (KVA00623). Annexin A6 expression in wild-type (WT) and Annexin A6 shRNA knockdown (KD) HT-1080 cells with 20 µg of total cell lysates. Hsp90 α serves as a loading control. The blot was incubated with Annexin A6 antibody (KVA00623, 1:5,000) and HRP-conjugated goat anti-rabbit secondary antibody (APS0635, 1:10,000) respectively.

Western blotting analysis using annexin A6 antibody (KVA00623). Total cell lysates (30 µg) from various cell lines were loaded and separated by SDS-PAGE. The blot was incubated with annexin A6 antibody (KVA00623, 1:5,000) and HRP-conjugated goat anti-rabbit secondary antibody (APS0635, 1:10,000) respectively.

Validation of Annexin A6 knockdown using flow cytometry. Wild-type(WT, Blue) and knockdown(KD, Green) HeLa cells were stained with Annexin A6 antibody (KVA00623, 1:2,000) and analyzed using BD flow cytometer.

Flow cytometric analysis of Annexin A6 expression in HepG2 cells using Annexin A6 antibody (KVA00623, 1:2,000). Green, isotype control; red, Annexin A6.
