Molecular Weight 44.9kDa

Antigen Information

Gene Name SIRT7
Alternative Names SIR2L7
Gene ID 51547.0
SwissProt ID Q9NRC8

Immunogen Purified recombinant fragment of human SIRT7 (AA: 1-105) expressed in E. Coli.

Background

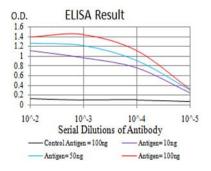

This gene encodes a member of the sirtuin family of proteins, homologs to the yeast Sir2 protein. Members of the sirtuin family are characterized by a sirtuin core domain and grouped into four classes. The functions of human sirtuins have not yet been determined; however, yeast sirtuin proteins are known to regulate epigenetic gene silencing and suppress recombination of

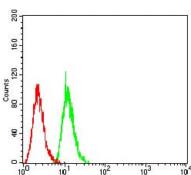

rDNA. Studies suggest that the human sirtuins may function as intracellular regulatory proteins with mono-ADP-ribosyltransferase activity. The protein encoded by this gene is included in class IV of the sirtuin family.
