cellular differentiation and organogenesis during vertebrate development. This gene is expressed during early embryogenesis and localizes to endo- and mesodermally derived cells during later embryogenesis and thereby plays an important role in gut, lung, and heart development. Mutations in this gene are associated with several congenital defects. [provided by RefSeq, Mar 2012], function: Thought to be important for regulating terminal differentiation and/or proliferation., similarity: Contains 2 GATA-type zinc fingers., tissue specificity: Expressed in heart, gut and gut-derived tissues.,
