Background

glycogen synthase kinase 3 alpha(GSK3A) Homo sapiens This gene encodes a multifunctional Ser/Thr protein kinase that is implicated in the control of several regulatory proteins including glycogen synthase, and transcription factors, such as JUN. It also plays a role in the WNT and PI3K signaling pathways, as well as regulates the production of beta-amyloid peptides associated with Alzheimer's disease. [provided by RefSeq, Oct 2011], catalytic activity: ATP + [tau protein] = ADP + [tau protein] phosphate., function: Implicated in the hormonal control of several regulatory proteins including glycogen synthase, MYB and the transcription factor JUN., similarity: Belongs to the protein kinase superfamily., similarity: Belongs to the protein kinase superfamily. CMGC Ser/Thr protein kinase family. GSK-3 subfamily., similarity: Contains 1 protein kinase domain., subunit: Monomer.,
