**Background**

Cell localization:Membrane; Single-pass type I membrane protein..The protein encoded by this gene may play a role in the attachment of stem cells to the bone marrow extracellular matrix or to stromal cells. This single-pass membrane protein is

highly glycosylated and phosphorylated by protein kinase C. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Aug 2011],

## Research Area

## Image Data

SW480 whole cell lysates were separated by 10% SDS-PAGE, and the membrane was blotted with CD34 Rabbit Monoclonal Antibody(1:1000). The HRP-conjugated Goat anti-Rabbit IgG(H + L) antibody was used to detect the antibody.
