Immunogen	A synthetic peptide of human IKK alpha

Background

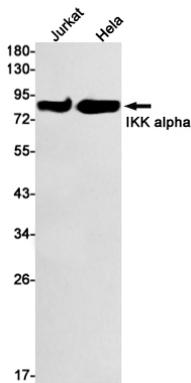

Plays an essential role in the NF-kappa-B signaling pathway which is activated by multiple stimuli such as inflammatory

cytokines, bacterial or viral products, DNA damages or other cellular stresses. Activation of IKK depends upon phosphorylation at Ser177 and Ser181 in the activation loop of IKK β (Ser176 and Ser180 in IKK α), which causes conformational changes, resulting in kinase activation.

Research Area

PI3K-Akt signaling pathway, MAPK signaling pathway
